

Measuring Guide

Measuring Guide for Inside & Outside Mounts

Measuring Tips

- Decide on which Mount Type you want: Inside Mount or Outside Mount.
- Use a standard Metal Tape Measure.
- Round Down to the Nearest 1/8" for Width.
- Write Down Your Measurements.

Inside Mount

Width

- Measure the inside edge of the window in 3 places (top, middle and bottom) taking the exact width left to right.
- Of the three measurements, take the **smallest size** and write that measurement on your order.

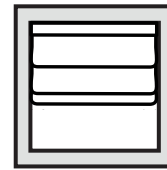

Height

- Measure the inside edge of the window in 3 places (left, middle and right) taking the exact height top to bottom.
- **For Blinds & Shades:** of the three measurements, take the **largest size** and write that measurement on your order.
- **For Shutters and BetterFit™ Shades:** take the **smallest size** on the height.

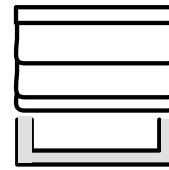

NOTES

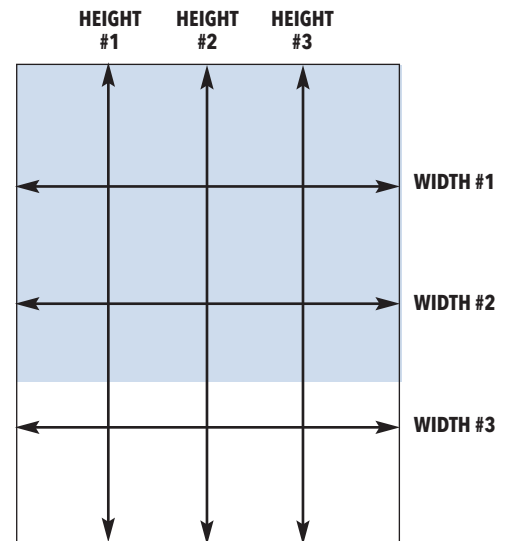

- Maxxmar™ will make necessary deductions to fit the window opening.

INSIDE MOUNT

OUTSIDE MOUNT

Outside Mount

Width

- Measure the outer edge of the left hand window moulding to the outer edge of the right hand window moulding.
- Add extra inches for coverage on each side of the window to minimize light gaps and for additional privacy.

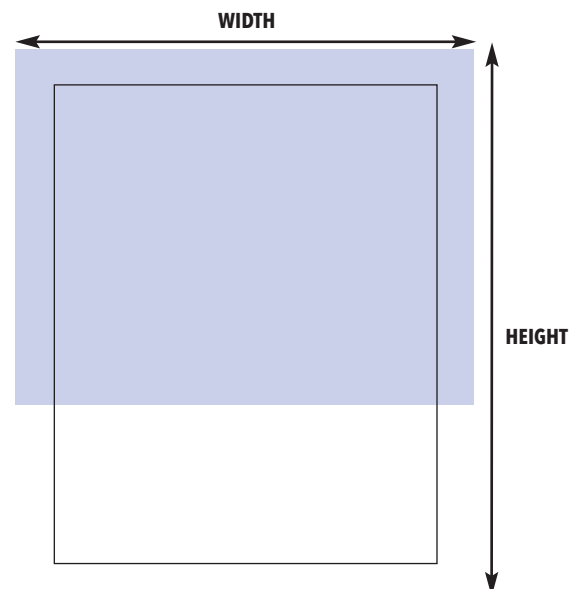

Height

- Measure the top edge of the window moulding to the bottom edge of the window moulding.
- To accommodate for hardware height, add extra inches to the overall shade height ensuring proper coverage for the installation.

NOTES

- Determine whether you want to install the shade **on top** of the window moulding or **directly onto** the window moulding.
- In either case, ensure that you have approximately **2 1/2" of clearance** and that you have a **flat surface** on to which to install the product.
